

Husqvarna Screed Blades

Screed blades for the versatile, petrol-driven walk-behind concrete power screed Husqvarna BV 30 are designed to deliver a high-quality slab. Can be used on thin slabs up to 100 mm without other vibration. Interchangeable blades allow for five different working widths. With their round ends, the blades are designed to leave the least possible marks so that less additional surface work is required. Since the blades are lightweight and rigid the vibration will be transferred uniformly to deliver a high-quality slab finish.

Professional results, every time

The rigid bottom plate features a V-shaped profile that drives excess concrete backwards, which refills operator foot marks.

User and service friendly

The interchangeable blades are fixed on the drive unit with only two bolts, making them easy and quick to replace on site.

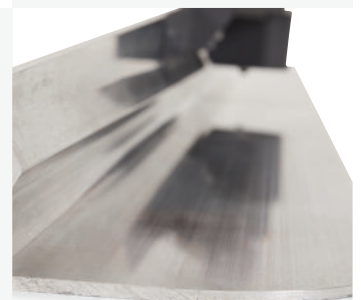

Multiple working widths

Interchangeable blades allow you to make use of five different working widths.

Quality and durability

There's little need for maintenance thanks to lightweight non-corrosive aluminium profiles.

FEATURES

- Multiple working widths
- User and service friendly
- Professional results, every time
- Quality and durability
- Easy cleaning
