

## Husqvarna BE 20

The powerful Husqvarna BE drive unit together with BD double-beam screeds produce deep vibration down to 150 mm. With BD double beam lengths from 3.2 m to 6.2 m you can work on any medium to large flooring constructions sites. You can use the BE drive unit for in-depth vibration and levelling. BE 20 can also be used for surface vibration by rotating the unit 90 degrees. Electric or petrol vibrating units provide versatility in regards to job site conditions.

### Durability

The switch box is mounted on a rubber element to dampen vibrations and thus extend its lifetime.

### Flexibility

Detachable electric or petrol drive units provide versatility in regards to job site conditions. They can both power all BD double-beam screed lengths.

### Smart two-in-one solution

The possibility to use our double-beams for both surface vibration and levelling by rotating the drive unit 90 degrees makes them a popular choice for finishing concrete floors.

### Efficient vibration

Adjustable vibration force together with 100 mm profile height produce in-depth vibration down to 150 mm thickness. The lightweight profile allows a higher stroke, enabling efficient work in different conditions.

## FEATURES

- Smart two-in-one solution
- Flexibility
- Durability
- Efficient vibration

### Technical Specifications

ENGINE	
Output power (As rated by the engine/motor manufacturer)	0.45 kW
SPECIFICATIONS	
Direction of rotation	Both directions
Start system	Phase inverter switch
PACKAGING	
Packaging length	800 mm
Packaging width	600 mm
Packaging height	380 mm
