Features for S 11

High productivity

Thanks to the automatic filter cleaning, you can keep operating without interruptions. The dust collector has a constant high airflow, and leaves minimum dust on the floor.

Excellent mobility

The low weight, compact design and transport handles allow for smooth transportation.

Efficient filtration system

The three separate filtering stages result in longer working time between filter cleaning. The dust is filtered through a cyclone chamber, which separates the heaviest parts, up to 90% of the dust, before the washable main filter.

Auxiliary outlet

It is quick and easy to connect the dust collector with your power hand tool with the Aux power outlet.
