

Husqvarna Blastrac EBE 350S

The Blastrac EBE 350S steel blaster is a hydraulic machine that reduces time on the job and maintenance costs. The steel blast cleaning machine is perfect for preparing horizontal steel surfaces before the application of new coatings. It is also ideal for removing coatings and paint from steel surfaces. Can be used on horizontal steel surfaces such as ship decks, steel plates, helicopter decks and walkways and bridge decks.

Easy to manoeuvre

The machine is equipped with an independent hydraulic drive motor on each rear wheel to make it ergonomically easy to use. They also improve productivity and promote a more even and consistent blast pattern and surface profile.

Ideal for outside projects

The steel blaster is ideal for projects in ship repairing, offshore (oil and gas) and helidecks industries, or whilst working on steel plates and bridge deck projects.

Work virtually dust free

The steel blasting machine has to be connected to a Blastrac industrial dust collector to create a closed circuit. This means that you are able to work virtually dust free, creating a better working environment.

Intuitive and ergonomic control panel

A user friendly control panel with functions that are easy to reach and monitor enables smooth control and operation.

FEATURES

- Work virtually dust free
- Ideal for outside projects
- Easy to manoeuvre
- Intuitive and ergonomic control panel
- Resource-smart solution
