

## Husqvarna Blastrac EBE 200V

Fast and effective, the electric steel blaster Blastrac EBE 200V is perfect for all vertical steel and concrete blast cleaning applications. It is designed to clean vertical surfaces such as oil/storage/water tank shells, ship hulls, wind turbine towers and much more. Easily remove coatings and paint from steel surfaces or prepare steel surfaces before the application of new coatings. It is controlled from a wired control station for operator comfort and productivity. Blastrac EBE 200V is able to blast moving both up and down.

### Access narrow spaces

This vertical steel blaster is a very compact and can access smaller areas.

### Increased productivity

The steel blaster is controlled from a wired control station in order to increase productivity.

### Work virtually dust free

The steel blasting machine has to be connected to a Blastrac industrial dust collector to create a closed circuit. This means that you are able to work virtually dust free, creating a better working environment.

### For steel and concrete surfaces

The steel blaster sticks to the surface thanks to the vacuum created by the dust collector, enabling this system to work on both steel and concrete.

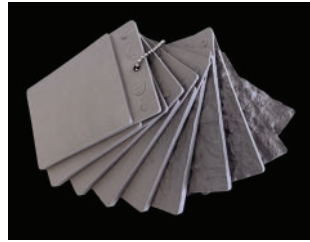

## FEATURES

- Work virtually dust free
- Increased productivity
- Access narrow spaces
- For steel and concrete surfaces
- Resource-smart solution
